WEB DEVELOPMENT CASE STUDIES

Three Website Projects with Design and Source-Code Screenshots

This report documents three sample websites: a Yoga and Meditation Website, a Bakery and Cake Shop Website, and a Healthy Food and Nutrition Website. Each case study describes the objective, key features, technologies, design, and possible improvements, followed by the supplied screenshots.

Included evidence: 6 screenshots (one website preview and one code/CSS screenshot for each project).

Case Study 15: Yoga and Meditation Website

Introduction

The Yoga and Meditation Website is a wellness information site designed to introduce visitors to yoga poses, meditation techniques, instructors, class timings, membership options, and wellness articles. Its purpose is to present health and relaxation services in a clear, welcoming layout.

Objective

To help visitors learn about yoga and meditation sessions and quickly find schedules, plans, and contact information.

Main Features

- Header with the site name and a short wellness tagline.
- Navigation links for Home, Yoga, Meditation, Plans, and Contact.
- Yoga pose cards with images and short benefits.
- Meditation technique cards, instructor profiles, and class schedule.
- Basic and Premium membership plans, wellness article links, and a contact form.

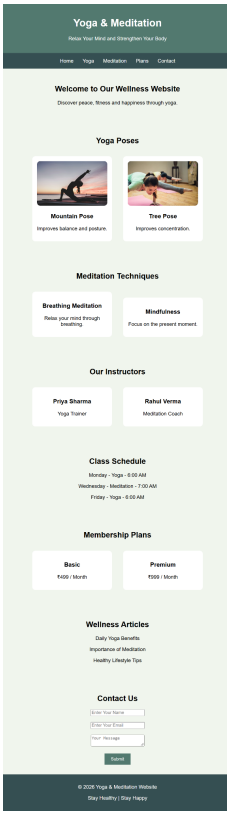

Technologies Used

HTML structures the page and its sections; CSS styles the colors, spacing, cards, navigation, images, and form. The supplied screenshots show the page preview and its styling/source code.

Conclusion and Future Improvements

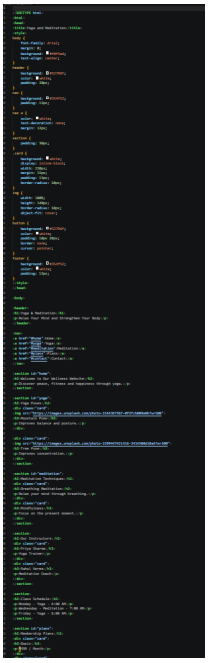

Possible improvements include making the navigation responsive on mobile, connecting the contact form to a backend, adding accessible labels to form controls, and providing real booking/payment functionality if required.

Case Study 9: Bakery and Cake Shop Website

Introduction

The Bakery and Cake Shop Website is a product-promotion website for a bakery. It displays baked goods, prices, seasonal offers, custom cake options, and contact details so customers can explore products and learn how to reach the shop.

Objective

To showcase bakery products attractively, communicate prices and offers, and encourage customers to enquire about custom cakes.

Main Features

- Branded header with the bakery name and tagline.
- Navigation links for Home, Products, Offers, Custom Cakes, and Contact.
- Product cards for chocolate cake, strawberry pastry, cookies, and cupcakes, with images, descriptions, and prices.
- A seasonal offers section highlighting discounts.
- Custom cake examples for birthdays and weddings, plus address, phone, email, opening hours, and footer.

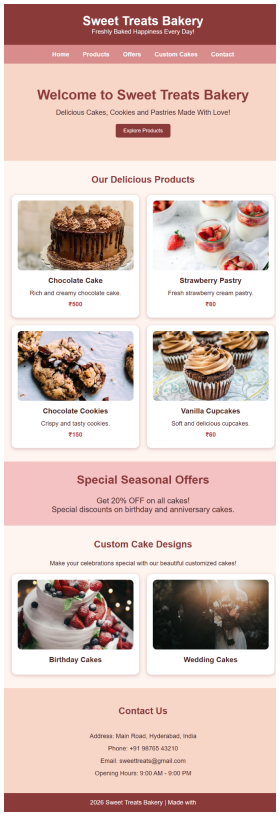

Technologies Used

HTML provides the content and page sections. CSS creates the warm color palette, product-card grid, rounded corners, image sizing, spacing, and button styles. The screenshots include the rendered bakery page and its CSS/source view.

Conclusion and Future Improvements

Possible improvements include adding product categories, an order/enquiry form, responsive navigation, allergen information, and a secure checkout or ordering system if the business needs online sales.

Case Study 14: Healthy Food and Nutrition Website

Introduction

The Healthy Food and Nutrition Website, branded as NutriFit, presents healthy recipes, calorie information, ingredients, a sample daily meal plan, and healthy eating tips. It is intended to make basic nutrition information easy to browse.

Objective

To encourage healthy food choices by organizing recipe details and everyday nutrition guidance in a simple visual format.

Main Features

- NutriFit title and navigation for Home, Recipes, Meal Plans, and Tips.
- Hero section with a healthy-eating message and Explore Recipes button.
- Recipe cards showing food images, calories, and ingredients.
- Daily meal plan covering breakfast, lunch, snacks, and dinner.
- Healthy eating tips and a footer with the site's message.

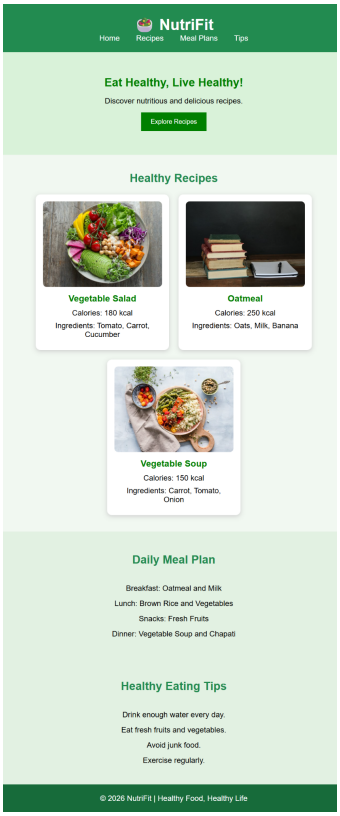

Technologies Used

HTML organizes the recipe cards, meal plan, and tips. CSS supplies the green theme, flexible card layout, image presentation, spacing, typography, and responsive behavior. The provided screenshots show the website and the corresponding CSS/source code.

Conclusion and Future Improvements

Possible improvements include adding dietary filters, clearly noting that calorie values are estimates, supporting different dietary needs, improving keyboard accessibility, and making the page adapt to smaller screens.
